immune n bone

The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompactibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              treatment of severe aplastic anaemia, leukaemia, and immune deficiency
                                                                                                                                                                                             The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the
                                                                                                                                                                                                                                                                                                     A new minor histocompatibility antigen, HA-1 - useful to treat immune diseases and prevent rejection and host versus graft disease in bone marrow and organ transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Minor histocompatibility antigen; HA-1; T-cell epitope; immunological; graft versus host disease; bone marrow transplant; leukaemia; vaccine; diagnosis; aplastic anaemia; immune deficiency disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   diseases

                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a new peptide (P1) constituting a T-cell epitope obtainable from the minor histocompatibility antigen HA-1. The peptide is immunogenic and can be used as part of a vaccine. P1 is used as a medicine, to induce tolerance for transplants, prevent rejection and/or graft versus host disease, or to treat (auto) immune diseases. In particular it can be used with bone marrow transplantation, in the treatment of severe aplastic anaemia, leukaemia, and immune deficiency
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A new minor histocompatibility antigen, diseases and prevent rejection and host marrow and organ transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Minor histocompatibility antigen; HA-1; T-cell epitope; immunological; graft versus host disease; bone marrow transplant; leukaemia; vaccine; diagnosis; aplastic anaemia; immune deficiency disease.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents an immunogenic peptide constituting a T-cell epicope, obtainable from the minor histocompatibility antigen HA-1. The peptide can be used in vaccines or pharmaceutical formulations as medicines to induce tolerance for transplants so as to prevent rejection and/or Graft-versus-Host Disease, or to treat autoimmune diseases.

Neoplastic haematopoietic cells presenting the peptides, in an HIA class I context, can be eliminated after specific recognition of the peptides. The peptides can also be used to raise antibodies, T-cell receptor, B-and T-cells

The present sequence represents part of the minor histocompatibility antigen HA-1 R-allele. The specification describes methods for typing alleles (preferably the H and R alleles) of the minor histocompatibility antigen HA-1 in a sample, which comprise detecting polymorphic nucleotides in the cDNA or genomic nucleic acids of the alleles. The methods can be used for HA-1 typing for bone marrow transplants, severe aplastic anaemia, leukaemia and immune deficiency diseases, as well as detection of genetic aberrances. The probes and primers of the invention can be used to screen for the HA-1 alleles. The HA-1 peptides can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents part of the minor histocompatibility antigen HA-1 H-allele.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            anti-idiotypic B cells and/or T cells and antibodies
                                                                                          fragment encoded by DNA sequence having SNP, creating variant epitopes, selecting epitopes binding to MHC protein. A protein of the invention has cytostatic activity, and may have a use in a vaccine. The method is useful for generating a SNP profile of one or more individuals from a given species by applying the method for several protein from the individuals, where the SNP profile was related to disease, preferably cancer. This is useful for diagnosing a disease in an individual by generating the SNP-related polymorphic profile. A method of the invention is useful for transplanting haematopoietic stem cells from a donor to a recipient and treating cancer, preferably leukaemia, and for determining the progression, regression or onset of a treated disease. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                               The invention relates to a novel method for providing epitopes of allelic variants of antigenic proteins from specific species based on single nucleotide polymorphism (SNP), by defining target protein/peptide or its subset, screening database of DNA encoding target protein, identifying, selecting allelic peptide/protein variants, expression product or its
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Strittmatter W, Moll H;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     13-JUN-2003; 2003WO-EP006251.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel method for providing epitopes of allelic convariants of antigenic proteins from specific species based on single convicted polymorphism (SNP), by defining target protein/peptide or its converted protein graphism (SNP), by defining target protein/peptide or its converted protein graphism (SNP), by defining target protein/peptide or its converted protein graphism of the invention for selecting allelic peptide/protein variants, expression product or its converted protein graphism of the invention has converted protein graphism of the invention has converted protein for generating a SNP profile of one or more individuals from a converted protein graphism of the supplying the method for several protein from the converted protein graphism is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer. This is useful for diagnosing a disease in an individual by cancer in the SNP-related polymorphic profile. A method of the invention converted to transplanting cancer, preferably leukaemia, and for determining cancer, preferably leukaemia, and for determining cancer, preferably leukaemia, and for determining cancer is used in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                        CC This invention relates to novel isolated or purified peptides of the CC human respiratory syncytial virus (RSV), in particular ten RSV genes CC encoding 11 separate viral proteins: non-structural proteins NS-1 (also CC known as the 1C protein) & NS-2 (1B protein), a polymerase protein L and CC SH (also known as the 1A proteins). Specifically, it refers to a CC composition comprising an above peptide mixed with a pharmaceutical CC excipient or an RSV immunogenic composition comprising a recombinant CC expression vector with a nucleic acid insert encoding an above peptide. CC Thymphocytes (CTLs) that respond to a major histocompatibility complex CC (MHC) class I restricted T-cell stimulating peptide epitope of RSV. The CC RSV peptide is useful for preparing a diagnostic composition or an RSV (prophylactic or therapeutic) vaccine composition for a DNA-based CC immunisation, or for preparing an immune response provoking vaccine in CC the event of RSV infection (the vaccine being prepared by contacting the CC polypeptide in an immune response-provoking amount of specific CTL).

CC Poptide sequence is a human RSV high binding affinity peptide of the CC invention.

Novel isolated polypeptide e.g. spike polypeptide, Env polypeptide, of severe acute respiratory syndrome virus (SARS), useful as vaccine for SARS.

Disclosure; SEQ ID NO 8174; 839pp; English.

The invention relates to isolated polypeptides of the severe acute CC respiratory syndrome (SARS) corconavirus. The polypeptides include spike CC (S or E2), env (E or sM), membrane (M or E1), hemagglutinin-esterase (HE CC or E3), and nucleocappid (N) polypeptides, and the ORF1a and ORF1ab CC (replicase) polypeptides and their proteolytic fragments. The invention CC acids encoding the SARS virus polypeptides, primers specific for SARS (Virus nucleic acid sequences; kits for amplifying SARS virus target CC virus nucleic acids; a double-stranded RNA molecule 10-30 nucleotides in length CC which is able to inactivate the SARS virus in a mammalian cell; an CC expression construct for recombinant expression of a SARS virus spike CC viral antigen. The invention additionally provides a vaccine for the CC viral antigen. The invention additionally provides a vaccine for the CC wistled SARS virus, an attenuated SARS virus, a split SARS virus, a cc virus antigens, an attenuated SARS virus, a split SARS virus and comprising one or more SARS virus and one or more comprising one or more SARS virus antigens; methods of comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprising one or more SARS virus antigens and one or more comprised to a SARS patient comprised condition of the comprised conditions. The sars virus polypeptides and collected acids can be used in the preparation and manufacture of vaccines conditions and manufacture of vaccines conditions.

RESULT 11
The invention relates to a cytotoxic Yersinia pestis T-cell epitope, competition and of the 1000 sequences of 9 amino acids appearing as ADZ49933-ADZ50932. Also included are predicting peptides that are ceptitopes or can be used as diagnostic tools (comprising predicting which peptides bind to a HMC molecule (not defined) with high affinity using a neural network with at least one of the following features: some or all cof the inputs to the neural networks are generated using a hidden Markov model; or some or all of the inputs are encoded by an amino acid substitution matrix, different from an identity matrix) and a vaccine or diagnostic tool using a limited number such as at least 1, 2, 3, 4, 5, 8, 16, 32, 64, 128, 256, 512 of the peptides of ADZ49933-ADZ50932. In predicting peptides, the prediction of the neural network is combined with prediction or measurement of one of the following: proteasomal cleavage sites; MHC binding; presence of sequence or related sequence(s) in patent databases; TAP binding; gene or protein expression level; function of the protein; localization of the protein; and similarity to self proteins. The epitope is useful as a vaccine or diagnostic tool, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for the treatment or prevention of SARS. The SARS virus polypeptides, antibodies against them, and SARS virus-specific primers and kits containing them are useful for diagnosing or identifying the presence of SARS in a biological sample. The present sequence represents a SARS coronavirus T-cell epitope. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                      in a
                                                                                                                                                                                                                                                                                                                                                                     New cytotoxic Yersinia pestis T-cell epitope comprising useful as a vaccine or diagnostic tool and for inducing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  28-APR-2005
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WO2005037855-A2

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for inducing immune response in a subject (said immunity to yersinia pestis infection, the causative agent of plague). The present sequent a cytotoxic Yersinia pestis T-cell epitope of the invention.
                                             Sequences AAU71093-AAU71796 represent the 1039388-related protein and peptide fragments of the protein. 1039388 exhibits tissue specific expression in normal adult tissue, but it is also aberrantly expressed in many cancers including tumours of the prostate, bladder, kidney, colon, lung, breast, rectum and stomach. The 1039388 polynucleotide, its related protein and peptide fragments and specific PCR primers are therefore useful for diagnosing and treating cancer. A vector comprising a polynucleotide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 1039388 related protein, and a ribozyme capable of cleaving a polynucleotide having the 1039388 coding sequence, are both useful in the preparation of a composition for treating a patient with a cancer that expresses 1039388. The sequences can be used in diagnostic methods to monitor the level of 1039389 gene products in serum, blood, urine and tissue and to thereby detect the presence of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  tumour; cancer; cytostatic; gene therapy; antibody therapy; ribozyme; single chain monoclonal antibody; serum; blood; urine; tissue; human;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                  Sequences AAU71093-AAU71796 represent the 103P3E8-related protein and peptide fragments of the protein. 103P3E8 exhibits tissue specific expression in normal adult tissue, but it is also aberrantly expressed in many cancers including tumours of the prostate, bladder, kidney, colon, lung, breast, rectum and stomach. The 103P3E8 polymuclectide, its related protein and peptide fragments and specific PCR primers are therefore useful for diagnosing and treating cancer. A vector comprising a polymuclectide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 103P3E8-related protein, and a ribozyme capable of cleaving a polymuclectide having the 103P3E8 coding sequence, are both useful in the preparation of a composition for treating a patient with a cancer that expresses 103P3E8. The sequences can be used in diagnostic methods to monitor the level of 103P3E8 gene products in serum, blood, urine and tissue and to thereby detect the presence of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention relates to novel isolated or purified peptides of the CC human respiratory syncythal virus (RSV), in particular ten RSV genes CC encoding 11 separate viral proteins: non-structural proteins NS-1 (also CC known as the 1C protein) & NS-2 (1B protein), a polymerase protein L and CC sight structural proteins preferably G, also M, W2-1, M2-2, N, P, F, and CC structural proteins preferably G, also M, W2-1, M2-2, N, P, F, and CC composition comprising an above peptide mixed with a pharmaceutical CC excipient or an RSV immunogenic composition comprising a recombinant CC expression vector with a nucleic acid insert encoding an above peptide. CT lymphocytes (CTLs) that respond to a major histocompatibility complex CC (MHC) class I restricted T-cell stimulating peptide epitope of RSV. The CC (MHC) class I restricted T-cell stimulating peptide epitope of RSV. The composition, or for preparing an immune response provoking vaccine in CC the event of RSV infection (the vaccine being prepared by contacting the polypeptide in an immune response-provoking and activity. This composition sequence is a human RSV high binding affinity peptide of the

                                                                      밁
                                                                                                  ঠ
                                                                                                                                                                                                                                                       This invention relates to novel isolated or purified peptides of the CC human respiratory syncytial virus (RSV), in particular ten RSV genes CC encoding 11 separate viral proteins: non-structural proteins NS-1 (also CR known as the 1C protein) & NS-2 (IB protein), a polymerase protein L and CC eight structural proteins preferably G, also M, M2-1, M2-2, N, P, F, and CC composition comprising an above peptide mixed with a pharmaceutical CC excipient or an RSV immunogenic composition comprising a recombinant CC expression vector with a nucleic acid insert encoding an above peptide. CC Tlymphocytes (CTLs) that respond to a major histocompatibility complex CC (MHC) class I restricted T-cell stimulating peptide epitope of RSV. The CC RSV peptide is useful for preparing a diagnostic composition or an RSV (prophylactic or therapeutic) vaccine composition for a DNA-based composition, or for preparing an immune response provoking vaccine in the event of RSV infection (the vaccine being prepared by contacting the CC polypeptide in an immune response-provoking amount of specific CTL). CC peptide sequence is a human RSV high binding affinity peptide of the composition.
                                                                                                                                         Query Match

     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Score

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Vandekerckhove, Joel
APPLICANT: Gevaert, Kris
TITLE OF INVENTION: METHODS AND APPARATUS FOR GEL-FREE QUALITATIVE AND
TITLE OF INVENTION: QUANTITATIVE PROTEOME ANALYSIS, AND USES THEREFOR
FILE REFERENCE: VBV-001
CURRENT APPLICATION NUMBER: US/10/394,980
CURRENT FILING DATE: 2003-03-21
PRIOR APPLICATION NUMBER: W50/278,171
PRIOR APPLICATION NUMBER: US60/278,171
PRIOR APPLICATION NUMBER: US60/318,749
PRIOR FILING DATE: 2001-09-12
PRIOR APPLICATION NUMBER: US60/323,999
PRIOR FILING DATE: 2001-09-20
NUMBER OF SEQ ID NOS: 473
